Three-phase power provides the energy required for big HVAC systems, enabling efficient operation. Lighting and Elevators: To meet high power demand and enhance energy distribution, high-rise buildings commonly use three-phase systems to power advanced lighting systems and elevators.

What is the difference between a single-phase and a three-phase system?

Unlike single-phase systems, which use a single alternating voltage, three-phase systems use three voltages or currents that are phase-shifted 120 degrees relative to one another. This section discusses the fundamental arrangement of three-phase systems, their representation using phasor diagrams, and the distinction between line and phase values.
