

Is there an isolated bidirectional DC-DC converter?

This paper proposes a new design and implementation of an isolated bidirectional dc-dc converter to interface between a high voltage DC bus (HVDC) and a low voltage DC battery (LVDC). It features zero voltage switching regardless of the direction of the power flow, resulting in lower switching losses and an efficient converter.

Why do we need a DC-DC converter?

maintain a smooth and continuous power flow to the load. As the most common and economical energy storage devices in medium-power range are batteries and super-capacitors, a dc-dc converter is always required to allow energy exchange between storage device and the rest of system. Such a converter must have bidirectional power flow

What is a multiport-isolated DC-DC converter?

Among the promising solutions is a multiport-isolated DC-DC converter with characteristics of reduced component count, fewer conversion stages, and galvanic isolation. However, this system presents a challenge due to its inherent cross-coupling effect, complicating precise control.

What is a bidirectional DC-DC power converter?

Introduction Bidirectional dc-dc power converters have recently received a lot of attention due to the increasing need to systems with the capability of bidirectional energy transfer between two dc buses.

How to reduce cross-coupling effects in a DC-DC converter?

In , two additional switches per bidirectional port were introduced to reduce the cross-coupling effects, but this resulted in increased switching losses. Furthermore, in , a three-mode, three-port isolated DC-DC converter was proposed, utilising two DC relays for unidirectional decoupled power flow.

Can state-space generalised average modelling be used in a DC-DC converter?

The application of state-space generalised average modelling, which is typically utilised to analyse the dynamics of a DC-DC converter, faces challenges in the context of an isolated converter.

power flow to the load. As the most common and economical energy storage devices in medium-power range are batteries and super-capacitors, a dc-dc converter is ...

The main aim of this article is to develop an isolated bidirectional CLLC converter that achieves a wide output-voltage range for residential energy storage systems (ESS), while maintaining high efficiency and

achieving high power density. The circuit is a two-stage architecture, where the first stage is an isolated CLLC converter with open-loop fixed ...

Bi-directional converters use the same power stage to transfer power in either directions in a power system. Helps reduce peak demand tariff. Reduces load transients. V2G ...

UCs are new family of energy storage systems which have 20 times more energy storage capacity than conventional capacitors. Batteries have lower peak output power in comparison to UCs which can supply or receive large bursts of power. ... DC-DC converters are vastly applied in industry as interface circuits. Several bidirectional non-isolated ...

This paper proposes an isolated bidirectional dc-dc converter (IBDC) without a cooling fan with a low profile for a direct connection between a battery and the IBDC. To implement the low-profile IBDC, a dual active bridge ...

The Bidirectional dc/dc converter integrates primary energy storage, secondary energy storage, and a dc-bus with changing voltage ratios in a hybrid electric vehicle system. Two modes operate the bidirectional power control: with dc, a low voltage dual power supply and a high voltage regenerative energy [12].

In this paper a Non-isolated Bidirectional DC-DC converter is presented which can be used to transfer energy between different sources in both direction and it can be used for application which requires charging and discharging of battery. In this paper design of suitable control strategy of a non-isolated bidirectional DC-DC converter is described. The given converter has ...

Abstract: This paper describes the design and performance of a 6-kW, full-bridge, bidirectional isolated dc-dc converter using a 20-kHz transformer for a 53.2-V, 2-kWh lithium ...

1 Introduction. Battery energy storage systems are widely used in high-voltage and high-power applications, such as aerospace, electric and hybrid vehicles, energy storage devices for renewable energy systems; and energy ...

Demand for high-efficient isolated DC/DC converters to achieve energy transfer among renewable energy sources, energy storage elements, and loads is increasing because of renewable energies" increasing market ...

The selection of a bidirectional non-isolated dc-dc converter interfacing the battery and ultracapacitor (UC) in electric vehicles (EVs) is of critical importance for the overall system efficiency. Generally, efficiency comparison of converters is conducted based on given fixed input and output parameters. Such a comparison may not provide fair results for EV applications ...

In Isolated DC/DC converters, transformers are needed not only to realize voltage ratio but also to provide galvanic isolation for safety. Common mode (CM) leakage current ...

EVs, especially PHEVs, require energy storage systems (ESSs) with high energy and power density [1], ... Third, a non-isolated DC/DC converter, which has the features of small volume, light weight and high efficiency, is selected to make the compact and efficient HESSs. Fig. 2 shows the details of a Bi buck-boost DC/DC converter ...

In recent years, there has been increasing interest in studying DC microgrids and DC/DC converters due to their compatibility with renewable energy sources, energy storage systems, and loads [16]. To ensure efficient electrolytic hydrogen production, power electronic converters must possess characteristics such as low voltage, high current capability, minimal ...

This paper presents a new control method for a bidirectional DC-DC LLC resonant topology converter. The proposed converter can be applied to power the conversion between an energy storage system and a DC bus in ...

Additionally, as storage systems grow ever larger, the ability to install many DC-DC converters in parallel safely is needed to develop ever larger battery energy storage. The large amount of capacitance found on the output ...

Abstract--An isolated three-port bidirectional dc-dc converter composed of three full-bridge cells and a high-frequency trans-former is proposed in this paper.

The Power Conversion System (PCS) is a key part of the Energy Storage System (ESS) which controls the charging and discharging of the battery. PCS can convert the energy stored in the bus into AC power and supply ... (40V to 60V) require bidirectional isolation DC/DC due to the high bus voltage (360V to 550V). This article

This paper recommends a three-input DC-DC converter topology with two photovoltaic cells, and one battery providing additional storage. The independent control of input sources enhances the converter reliability during the failure of any one input unit. In addition, the energy storage system is charged by the output port for continual operation.

Mainly Bidirectional DC-DC Converter (BDC) converters are subdivided as Non-Isolated & Isolated Bidirectional converters. NBDCs transmits power in absence of magnetic isolation which means it doesn't use a transformer for the power exchange which is advantageous in various applications over IBDC where size and weight are a major concern but it has the ...

In this paper, a novel high-efficiency bidirectional isolated DC-DC converter that can be applied to an energy storage system for battery charging and discharging is proposed. By integrating a coupled inductor and switched ...
