The rapid growth of energy storage systems demands higher-performance lithium-ion batteries (LIBs). However, state-of-the-art polycrystalline (PC) LIB cathodes struggle with low compaction density, limiting their use in volume-constrained applications. While single-crystal (SC) materials such as  $\text{LiCoO}_2$  suffer from low gravimetric energy density.

In fact, some traditional energy storage devices are not suitable for energy storage in some special occasions. Over the past few decades, microelectronics and wireless microsystem technologies have undergone rapid development, so low power consumption micro-electro-mechanical products have rapidly gained popularity [10, 11].The method for supplying ...

Jiang energy storage electronic lock Say goodbye to manual lock checks and lost keys. Our smart locking solution empowers your tenants to access their self storage units conveniently, and ...

In linear dielectric polymers (the electric polarization scales linearly with the electric field, such as polypropylene, PP), the electrical conduction loss is the predominant energy loss mechanism under elevated temperatures and high electric fields [14, 15] incorporating highly insulating inorganic nanoparticles into polymer dielectrics has been proved effective in the ...

These challenges can be addressed by developing green, eco-friendly, inexpensive energy sources and energy storage devices. Electrochemical energy storage materials possess high capacitance and superior power density. To engineer highly efficient next-generation electrochemical energy storage devices, the mechanisms of electrochemical ...

Zinc-based batteries (ZBs) have recently attracted wide attention energy storage with cost-effectiveness and intrinsic safety. However, it suffers from poor interface stability between the zinc anode and the electrolyte. Although the structure of the ...

In the past few years, layered metal disulfides, such as WS<sub>2</sub>, [19] SnS<sub>2</sub>, [20] VS<sub>2</sub>, [21] and MoS<sub>2</sub>, [22] have attracted tremendous attention in battery research due to their large interlayer spacing. The layered structure in these materials facilitates the mass transport of various charge carriers and can also accommodate the volume variations during intercalation ...

To satisfy the higher quality demand in modern life, flexible and wearable electronic devices have received more and more attention in the market of digital devices, including smartwatches [1, 2], bendable smartphones [3], and electronic braids [4]. Therefore, energy storage devices with flexibility and high electrochemical performance have received ...
