Will Kazakhstan gain market share in battery materials?

The country wants to gain market share in battery materials such as lithium, cobalt, manganese, nickel and graphite amid rising demand for the materials, Sharlapaev said. Kazakhstan already mines manganese, but last year it launched processing of manganese sulphate and aims to eventually capture 10% of the global market for the battery material.

Why are lithium-ion batteries so expensive?

The cost of raw materials, particularly lithium carbonate, plays a significant role in the pricing of lithium-ion batteries. The recent decrease in lithium prices has been a major factor in lowering battery costs. As lithium is a key component in these batteries, fluctuations in its price directly impact the overall cost of battery production.

Are lithium-ion batteries efficient?

Lithium-ion batteries are one of the most efficient energy storage devices worldwide. Over recent years, high-scale production and capital investment into the battery production process made lithium-ion battery packs cheaper and more efficient.

Are lithium-ion batteries on a downward trend?

The price of lithium-ion batteries has been on a downward trend, reaching a record low of \$139 per kWh in 2023 and continuing to decrease into 2024. The reduction in lithium prices, increased production capacity, and technological advancements have all contributed to this trend.

How does competition affect the price of lithium-ion batteries?

This competition often results in price reductions as companies strive to offer more attractive pricing to gain market share. The price of lithium-ion batteries has been on a downward trend, reaching a record low of \$139 per kWh in 2023 and continuing to decrease into 2024.
