

The Generator set would still be mattered close to the solar installation. Work is still on going... For the solar panel connection a combined box was not used. Please revert to the hand drawn schematic i uploaded early. A positive wire ran through all positive panels terminals, same as the negative wire too, down to the charge controller.

Our solar inverter solutions can be implemented gradually to fit your financial capacity. You can start with a battery and inverter system, relying on NEPA/Generator to charge the battery through the inverter. As your budget allows, you can add more batteries and solar panels to enhance the system. It's not necessary to do everything at once.
