Energy production - mainly the burning of fossil fuels - accounts for around three-quarters of global greenhouse gas emissions. Not only is energy production the largest driver of climate change, but the burning of fossil fuels and biomass also comes at a large cost to human health: at least five million deaths are attributed to air pollution each year.

A new update of the National Integrated Energy and Climate Plan, better known as PNIEC, has recently been approved. This update represents a new boost to the decarbonisation objectives already set out in the initial formulation of the Spanish climate plan, reflecting a significant increase in the country's ambition regarding the sustainable targets to be achieved by 2030, ...
