

By combining photovoltaic (solar) technology with mobile energy storage, they significantly improve energy efficiency and alleviate the pain points of traditional charging methods.

Battery energy storage systems (BESS) are becoming an item one could buy, but it's largely aimed at one type of customer in particular.

Various customized options, from mobile charging solutions to real-world application scenarios. We provide a one-year warranty service. If you encounter quality problems, we will help you solve them at any time. We deliver your product into the field faster and cost efficiently by partnering with a variety of logistics services.

Volvo Energy has presented the PU500 BESS (Battery Energy Storage System) mobile power supply system with battery capacities of 450 to 540 kWh. The special feature: the integrated 240 kW fast charger can also be used to charge heavy electric vehicles.

We provide innovative mobile energy storage solutions and EV charger solutions designed for real-world use--urban and off-grid alike. Whether you're building an electric vehicle charging stations business plan or expanding your fleet management solutions, our technology helps you charge smarter, faster, and anywhere.

With its robust, adaptable design, Charge Qube is the definitive solution for businesses looking to future-proof their energy infrastructure, reduce emissions, and embrace the benefits of sustainable energy storage and high-performance EV charging.

Discover a new era of mobile charging with our advanced Energy Storage Mobile Charging system. Engineered to cater to a diverse array of emergency power needs, this system boasts a flexible power storage range from 26Kwh to 161kwh, ensuring it's always ready to provide a boost when you need it most.

Mobile high-power, high-capacity energy storage station is an integrated energy solution that combines a large-capacity battery storage system with mobility, enabling rapid deployment to provide electricity when needed.

We propose a new business model that monetizes underutilized EV batteries as mobile energy storage to significantly reduce the demand charge portion of many commercial and industrial users' electricity bills.

After two years of research and development, it launched a new mobile energy storage car charging product. At present, the products on the market cannot meet the two functions of moving and energy storage for rapid charging of electric vehicles at the same time.
