

What is Networked Energy Services (NES)?

A pre-integrated, cloud-ready and secure suite of analytics, operations and business support tools. Let the Smart Energy transition begin... Networked Energy Services (NES) is the global leader in providing Smart Grid technology for utilities through an efficient, reliable & secure Smart Energy Grid.

Who is nes Corporation?

Since its inception, NES Corporation has been deeply involved in the world's leading implementations of networked smart metering for utilities and DSOs, including more than 100 smart metering / smart grids projects and pilots in more than 25 different countries.

What is Networked Energy Services?

Introduction Networked Energy Services' (NES) vision is to offer industry leading, high performing, cost effective and sustainable smart grid solutions with our proven and open 3 tier, multi-application platform.

What is nes Smart Grid technology?

NES' smart grid technology is used in nearly 40 million smart meters and other smart devices around the world to enable energy efficiency and energy sustainability. NES products are utilized in the global energy transformation process and thus act to help protect the natural environment.

Why is the NES system important?

The NES System enables utility customers to actively participate in energy conservation programs and allows utilities to identify and help reduce the amount of losses in its low voltage network. These features are especially important within Poland and the entire EU today due to the critical need to reduce energy generation and consumption.

What is nes metering?

NES offers industry leading security built into its three tier Patagonia Platform. The most reliable smart metering solution in the industry, delivering 99.8% daily availability of meter data. The NES System offers a unique power line technology that enables grid mapping, automatic topology management, and many more low voltage grid applications.
