

What type of energy does New Zealand use?

The electricity sector in New Zealand uses mainly renewable energy, such as hydropower, geothermal power and increasingly wind energy. As of 2021, the country generated 81.2% of its electricity from renewable sources.

Who buys electricity in New Zealand?

Retail companies buy electricity from generators and on-sell that electricity to businesses and households across New Zealand. For most New Zealand electricity customers, there's a lot of retailers and brands to buy electricity from. The latest retail market share, market competitiveness and switching trends.

How does electricity supply work in New Zealand?

Supplying electricity to homes and businesses across New Zealand involves three key elements: generating electricity, transporting electricity to distribution companies, and then selling it to customers.

How much electricity does New Zealand generate a year?

In total, the nine powerhouses generate approximately 7600 GW?h annually, around 18% of New Zealand's electricity and more than 30% of all its hydroelectricity. Manapouri Power Station is a single underground power station in Fiordland, and the largest hydroelectric station in the country.

What percentage of New Zealand's electricity is generated by hydroelectric power stations?

Hydroelectric power stations generate most of New Zealand's electricity, with 24,066 GW?h generated by hydroelectricity in 2020 - 56% of New Zealand's electricity generated that year. The total hydroelectricity installed capacity is 5,434 MW as at the end of 2020.

Why do New Zealand's electricity regulators need a 'fit-for-purpose' regulation?

As New Zealand's electricity regulator, the changes occurring require proactive and fit-for-purpose regulation so consumers can reap the benefits of innovation and competition at least cost, while receiving a reliable electricity supply.
