This document was developed by the National Renewable Energy Laboratory with support provided by the Caribbean Center for Renewable Energy and Energy Efficiency. The ...

Near Field Communication (NFC) Type 2 tags and labels operate in the high-frequency (HF) 13.56 MHz range and comply with the NFC-A Technology specification from the NFC Forum. The data stored in these Type 2 tags and labels is transferred to NFC smartphones or professional NFC/RFID HF readers that support the NFC Data Exchange Format (NDEF).

The ERC provides an overview of energy sector performance in St. Vincent and the Grenadines by focusing on two priority sub-sectors: Electricity and Transportation. The ERC also includes ...

NFC-HF readers are used for short-range communications where the device on one end - the NFC tag - is completely passive. These readers are based on international standards: ISO/IEC 14443 for very short range communication at distances to the tag up to 10 cm and ISO/IEC 15693 enabling communication with NFC Forum Type 5 tags for distances up to 1 to 2 meters.

The Grenadines was also affected, as the lack of rainfall and very warm temperatures had all but dried up the limited supplies stored on the islands. On many occasions, water had to be taken by ferry, trucked, and then distributed on the islands. This further added strain to the already limited supply on the island of St. Vincent.
