What are the objectives of the Oman power project?

The objectives of the Project are to: (a) increase the availability of the renewable power generation capacity and improve the balance between supply and demand during the peak hours in Oman's Main Interconnected System grid which serves Muscat and northern Oman.

Why is Nama PWP launching wind projects in Oman?

Ahmed bin Salim al Abri, Acting CEO of Nama PWP, said, "The announcement of these wind projects is a pivotal moment for Oman's energy sector. These projects are not only critical in our mission to reduce greenhouse gas emissions but also play a fundamental role in advancing our national goals for renewable energy generation.

How many MW will Oman produce by 2025?

Although renewables were estimated to have made up less than 1% of the country's electricity mix in 2018, the Oman Power and Water Procurement Company (OPWP) aims to roll out 2500-3000 MWof generation capacity by 2025 in order to reach the target of 10% set by the National Energy Strategy.

What is Oman's net-zero energy plan?

As of August 2022 electricity capacity from renewables was around 650 MW, with the goal set at nearly 3.4 GW by 2027. Oman's net-zero announcement is expected to accelerate developments in the sultanate's renewable and green energy segments.

Does Oman have a natural gas Sultanate?

The sultanate also has two liquefied natural gas production facilities, with production surging to a record 10.6m tonnes in 2021 due to projects to expand capacity. Despite ample hydrocarbons resources, Oman aims for renewables to make up at least 30% of its energy mix by 2030.

Will Oman achieve net-zero emissions by 2050?

In October 2022 Oman became the third GCC country to commit to net-zero emissions by 2050, in support of the Paris Agreement. Following the UAE and Saudi Arabia - which in 2021 pledged to reach net-zero - Oman aims to build on a series of clean energy investments and power projects across the sultanate.

emissions from renewable power is calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if ...
