What is electrical energy storage (EES)?

Electrical Energy Storage, EES, is one of the key technologies in the areas covered by the IEC. EES techniques have shown unique capabilities in coping with some critical characteristics of electricity, for example hourly variations in demand and price.

What are the guidelines for battery management systems in energy storage applications?

Guidelines under development include IEEE P2686 "Recommended Practice for Battery Management Systems in Energy Storage Applications" (set for balloting in 2022). This recommended practice includes information on the design, installation, and configuration of battery management systems (BMSs) in stationary applications.

How should energy storage systems be designed?

Designing resilient systems: although it is impossible to design for any scenario, energy storage systems should be designed to withstand common and uncommon environmental hazards in the areas they will be deployed.

What are the commissioning activities of an energy storage system (ESS)?

Commissioning is required by the owner to ensure proper operation for the system warranty to be valid. The activities relative to the overall design / build of an energy storage system (ESS) are described next. The details of the commissioning activities are described in Section 2. Figure 1. Overall flow of ESS initial project phases

What are electrochemical energy storage deployments?

Summary of electrochemical energy storage deployments. Li-ion batteries are the dominant electrochemical grid energy storage technology. Characteristics such as high energy density, high power, high efficiency, and low self-discharge have made them attractive for many grid applications.

Do energy storage systems need a safety assessment?

Safety Assessment: As more energy storage systems have become operational, new safety features have been mandated through various codes and standards, professional organizations, and learned best practices. The design and commissioning teams need to stay current so that required safety assessments can be performed during commissioning.
