In the post-epidemic era, the world is confronted with an increasingly severe energy crisis. Global carbon dioxide (CO₂) emissions are already well over 36.8 billion tons in 2022 [1], and the substantial CO₂ output from fossil fuels is the main driver of climate change. The pressing global energy crisis and environmental issues, including climate change and the ...

With increased renewable energy penetration in power grids, the use of energy storage devices has become increasingly common. According to the United States Department of Energy (USDOE) [68], the capacity of ESSs increased by 24% from 2010 to 2017. In 2017, the worldwide capacity of ESSs was about 171 GW from 1267 operational projects [68].
