

What are phthalocyanines used for?

The combination of aromaticity, relatively simple synthesis and structural flexibility makes Pcs a great asset for numerous scientific and industrial advancements. This review focuses on recent advances (2014-2020) of phthalocyanines in the specific technologies of chemical sensors, non-linear optics (NLO), and energy storage applications.

Can phthalocyanine based materials be synthesised?

The difficulties and future directions for the synthesis of phthalocyanine based materials. Owing to the rapid decline of fossil fuels and related deleterious consequences throughout the globe, energy use is undergoing a significant and dramatic transition into electricity as major power source.

Can spray-growth improve phthalocyanine-based materials?

We believe this simple and scalable spray-growth method holds broad applicability for producing phthalocyanine-based materials, with the potential to elevate the role of M-Pc materials in ECR and contribute to carbon neutrality.

Are phthalocyanines a promising research opportunity?

Review focuses on recent advances (2014-2020) of phthalocyanines. Perspectives for huge research opportunities are highlighted. Phthalocyanines (Pcs) are intensely coloured, robust macrocycles that possess admirable chemical, thermal and photo-stability as a result of its extensive p-network.

Why do phthalocyanines have a low solubility?

However, strong intermolecular p-p stacking interactions of non-substituted metal phthalocyanines usually result in over aggregation, low solubility, and thus generally un-controllable assembly on the support surface with uneven and multilayered deposition, severely reducing the accessible active sites.

Are phthalocyanines a chemical sensor?

Phthalocyanines as chemical sensors We live in an environment with a variety of toxic substances, gases and polluted water systems.

This review focuses on recent advances (2014-2020) of phthalocyanines in the specific technologies of chemical sensors, non-linear optics (NLO), and energy storage ...

In situ-grown copper phthalocyanine (nCuPc) nanorod structures with nano titanium nitride (TiN_nCuPc) hybrid composites were acquired via hydrothermal conditions. As-synthesized TiN_nCuPc composite...

High-performance Zn-ion hybrid supercapacitors make high demands on the energy storage mechanisms of metal phthalocyanine. We propose a v-form zinc phthalocyanine (ZnPc) molecular crystal as a cathode material for flexible Zn-ion hybrid supercapacitors. ... prussian blue and analogues [29], [30], and store

charges through the reversible ...

Electrochemical capacitors (ECs) are a promising subset of energy storage devices that are well-suited for integrating with a variety of portable energy harvesting technologies [1-13]. ECs are subdivided into ...

Fig. 13 shows the Zeta potentials of the encapsulated phthalocyanine blue pigment dispersion and the comparative nanoscale and original phthalocyanine blue pigment dispersions. It is clear that Zeta potential of encapsulated phthalocyanine blue pigment was larger than that of the comparative phthalocyanine blue pigments dispersion.

With the rapid development of the world today, the ever-increasing of resource consumption and energy shortage are the urgent problems that we cannot ignore [1], [2]. Therefore, to exploit and develop renewable and eco-friendly energy storage devices are receiving increasing attention [3]. Among various energy storage technologies, ...

The self-polymerizable bipolar Cu tetraaminephthalocyanine (CuTAPc) shows multifunctional applications in various energy storage systems, including lithium-based DIBs using CuTAPc as the cathode material, graphite ...

In this chapter, we present the research progress of phthalocyanine-based polymeric materials in metal-ion batteries, metal-air batteries, and supercapacitors, ...

Phthalocyanine often occurs in the form of a dianion ... side-on/end-on O₂-adduct MPc and corresponding electronic dz₂, dx_z or dy_z orbitals representation, (c) Red/Blue lines representing the spin-up/spin-down non-bonding d ... The electrocatalytic CO₂ reduction reaction (CO₂ RR) is a key strategy for energy conversion and storage. However, ...

The data is based on a Web of Science keyword search using the terms "COFs" (blue), and "COFs Energy Storage" (dark yellow). This comprehensive review delves into the myriad applications of COFs in the field of electrochemical energy storage devices. With the ever-increasing demand for high-performance energy storage solutions, COFs hold the ...

Metal phthalocyanine (MPc) is an intensely blue-green-coloured, non-toxic aromatic macrocyclic (18 p-electron conjugated ring system) compound with four nitrogen atoms in the central cavity (Fig. 8.1a). This man-made ...

Porphyrin and phthalocyanine, typically planar aromatic macrocyclic molecules, have attracted considerable attention for application in rechargeable batteries due to their highly conjugated p-electron system, highly stable C-N bonds and bipolar features. In particular, the structure diversity from the central metal and the peripheral substitution groups not only ...

It is well known that CI Direct Blue 86 is a kind of phthalocyanine cyan dye. It is the first commercially available phthalocyanine dye, as shown ... Gounden, N. Nombona, W.E. Van Zyl, Recent advances in phthalocyanines for chemical sensor, non-linear optics (NLO) and energy storage applications, Coordination Chemistry Reviews, 2020, 420 ...

The renewable, safe, and reliable alternative energy resources and storage systems are thus very much required for modern society. In this context, H₂, O₂ and CO₂ involving electrochemical energy conversion and storage systems can be regarded as the sustainable way to meet the future energy demand. Nonetheless, the sluggish kinetics of these ...

Iron-phthalocyanine maximizes energy capacity, and electrochemical reliability. ... and iron (II) coordinated PTC exhibited the outstanding energy storage capacity (161.34 mAh/g) and electrochemical reliability (99%, 100 cycles). Based on maximized electrochemical performance and reliability, Zn-ion flexible battery was successfully ...

Essential Science Indicators(ESI),Journal of Energy Storage(IF:9.4)(Rational design of new,efficient,and suitable nickel phthalocyanine ...

Zn/Mg metal-organic framework composite for energy storage via cobalt phthalocyanine dye in a self-powered photosupercapacitor. Author links open overlay panel Ishita Naskar a, Akshay Kumar Ray a, Marina Freitag b, Melepurath Deepa a. ... CdS exhibits a strong and broad emission peak in the blue-green region spanning from 485 to 585 nm, ...

The most representative case is the phthalocyanine blue pigment (PcBP) ... then the pigment chips were dispersed with a fast and low-energy milling process to give the nano-PcBP dispersion, ... very low diffuse transmission, superb long-term storage stability, and incredible color saturation and depth. After incorporating nano-PcBP dispersion ...

In this work, a 2D conjugated phthalocyanine framework (CPF) containing single atoms (SAs) of cobalt (CoSAs-CPF) is developed as a novel artificial solid-electrolyte ...

Hydrogen energy storage has been considered as a key enabler for exploring novel materials with unique structures and properties, however, inadequate storage capacity, and instability leading to ...

Chemically exfoliated few-layer phthalocyanine-based covalent organic frameworks used as improved energy storage electrode for lithium-ion batteries. Author links open overlay panel Suqin Liu 1, Luyi Wang 1, ... As the temperature continued to rise until a blue color appeared in the solution, 3.24 g of previously dried anhydrous cobalt chloride ...

A thorough introduction to phthalocyanine-based polymers and their uses in sensors, catalysis, energy storage, and other applications; Comprehensive explorations of the ...

1 Introduction Energy, in all of its appearances, is the driving force behind all life on earth and the many activities that keep it functioning. 1 For decades, the search for efficient, sustainable, and reliable energy storage devices has been ...

The on-going search for new energy storage and conversion systems has made phthalocyanines even prettier as alternatives to metal and metal oxide catalysts because of their lower cost. ... New peripherally and non-peripherally tetra-substituted metal-free, magnesium(II) and zinc(II) phthalocyanine derivatives fused chalcone units: Design ...

1 Introduction. As global energy demand and CO₂ emissions rise, developing sustainable energy conversion and storage technologies is critical for mitigating climate change. [1-3] Electrochemical CO₂ reduction (ECR) ...

Particle size reduction of phthalocyanine blue pigment. Robert Ian McDowell 1981- University of Louisville Follow this and additional works at: <https://ir.library.louisville.edu/etd> Recommended Citation McDowell, Robert Ian 1981-, "Particle size reduction of phthalocyanine blue pigment." (2006). Electronic Theses and Dissertations. Paper 946.

Relative to copper phthalocyanine blue, Indanthrone Blue is considerably redder in hue and markedly superior in both bronze resistance and flocculation resistance. Carbazole Violet, Pigment Violet 23, is a complex polynuclear pigment that is an intense red shade blue of high tint strength. ... and the energy storage density of 6.1 ...

The very important blue pigment copper phthalocyanine is a tetraazatetrabenzoporphin and the basic polyene chromogen of the molecule is as in ... components of many other natural molecules and playing vital roles in metabolic processes. 8 CHs can be oxidized to yield energy, to act as energy-storage molecules, ...

Carbon based copper phthalocyanine composite materials are excellent candidates for various applications like energy storage, CO₂ reduction, etc. due to the covalent interaction between the phthalocyanine rings with the carbon material leading to changes in the structure and electronic properties [25, 26].

Benefiting from high thermal storage density, wide temperature regulation range, operational simplicity, and economic feasibility, latent heat-based thermal energy storage (TES) is comparatively ...

In this chapter, we wish to review the recent progress in the application of phthalocyanines as functional molecular materials including (1) semiconducting materials for organic photovoltaic cells and organic field effect transistors, (2) functional organic dyes as photosensitizers for photodynamic therapy and dye-sensitized solar cells, and (3) single-molecule magnets.
