

What is the energy storage capacity of a gravity piston?

EP is the energy stored in the gravity piston. The compressed air part relies on the air compression and expansion for energy conversion, and its energy storage capacity can be expressed as: $E_A = \eta_A \frac{P}{\gamma} V_1 \ln \frac{V_1}{V_2}$ where η_A is the circulation efficiency of isothermal compressed air. V_1 is the volume of air before compression.
