

# Profits of behind-the-meter energy storage in Italy

Can Italy make battery storage projects commercially attractive?

"Italy has a clear need for storage, and the enabling market and regulatory mechanisms are being put in place to make battery storage projects commercially attractive." CIP's Flagship Fund CI V, completed in March 2025, exceeded its EUR12bn (\$12.9bn) target.

Why is CIP launching large-scale battery projects in Italy?

The development of large-scale battery projects aligns with CIP's growing focus on energy storage. With Italy's supportive regulatory environment, the partnership aims to leverage CIP's expertise to advance its storage infrastructure projects. The move also supports Italy's aim to meet the nation's 2030 renewable energy targets.

Is Italy the hottest battery market in Europe?

Italy has established itself as one of Europe's hottest battery markets. The country placed top among 28 European battery storage markets recently surveyed by Aurora Energy Research, driven by its 50 GWh battery capacity target by 2030 and the opening of its ancillary markets to BESS.

Is a behind-the-meter battery investment commercially viable?

For a behind-the-meter battery investment to be commercially viable it will often require more than one value stream to be targeted- there's often just not enough value in a single element - and the projects delivering the best financial returns will be stacking market revenue in addition to reduce energy supply costs.

What is behind-the-meter battery storage system (BTM-BSS)?

1. Introduction Deployment of behind-the-meter battery storage systems (BTM-BSS) has multiple benefits. Recent years have witnessed a steep decrease in battery costs and increase in distributed energy generation. BTM-BSS can reduce electricity costs for consumers, provide energy security and improve the overall grid efficiency .

How many GW of batteries will be added in Italy by 2030?

"We expect 10.5 GW[of battery projects]to be added in Italy by 2030, of which 3 GW are already in an advanced stage so they will probably come online within the next two to three years," said Eva Zimmermann, senior associate for flexible energy at Aurora, recently told pv magazine Italia.

The "impressive results" were driven by a combination of support schemes and improving market conditions for storage, LCP Delta said. One key takeaway, which we wrote about in the most recent ESN Premium Friday ...

This paper focuses on an advanced optimization method for optimizing the size of the behind-the-meter (BTM) battery energy storage system (BESS) that provides stackable services to improve return on

investment. The grid frequency regulation service and two customer-side services, i.e., energy arbitrage and peak shaving, are selected as stackable ...

A schematic diagram of a behind-the-meter energy system. Schematic diagram of a BTM PV plus ESS. ESS connection point can either be at the DC-link or the point of common coupling (PCC).

The Global Behind The Meter Stationary Battery Storage Market, valued at USD 42.3 billion in 2024, is poised for remarkable growth at a CAGR of 19.5% between 2025 and ...

This article introduces the relevant supporting policies in Europe and the United States in terms of electricity prices, planning, fiscal and tax subsidies, market rules, etc.

Battery storage systems are being deployed at multiple levels of the electricity value chain, including at the transmission, distribution and consumer levels. According to the Energy Storage Association of North America, market applications are commonly differentiated as: in-front of the meter (FTM) or behind-the-meter (BTM).

Behind-the-meter storage (BTMS) systems directly supply homes and buildings with electricity and offer many advantages such as the ability to minimize grid impacts, integrate EV charging, and more. The BTMS markets ...

The research concludes with a reflection on the prospects of storage systems in the Italian energy context, highlighting the most profitable Business Models and emphasizing how, with robust regulatory support, BESS will become not only essential tools for grid stability and good ...

The cost of behind-the-meter lithium-ion battery systems for households ranged between 895 U.S. dollars per kilowatt-hour in the UK and 723 U.S. dollars per kilowatt-hour in Italy. Read more

Energy storage systems (ESSs) controlled with accurate ESS management strategies have emerged as effective solutions against the challenges imposed by RESs in the power system [6]. Early installations are large-scale stationary ESSs installed by utilities, which have had positive effects on improving electricity supply reliability and security [7, 8].

Bulgaria's Ministry of Energy is currently running two tenders aiming to commission 1,425 MW of solar and wind generation capacity coupled with 350 MW of behind-the-meter energy storage. The ...

Behind the Meter: Battery Energy Storage Concepts, Requirements, and Applications. By Sifat Amin and Mehrdad Boloorchhi. Battery energy storage systems (BESS) are emerging in all areas of electricity sectors including ...

# Profits of behind-the-meter energy storage in Italy

The development of Battery Energy Storage Systems (hereinafter "BESS") in Italy has been limited by the fact that the spread of renewable sources is not such as to produce significant price ...

Front-of-the-meter Behind-the-meter Gross annual capacity additions of energy storage in Europe (MW) 10 ... Spain Italy Poland France Portugal Rest of Europe FTM forecast by country (%MW, 2022- ... China and the US poised to lead a rapid scale-up in the front-of-meter energy storage market over next few years Data compiled March. 1, 2023.

A new business opportunity beckons with the emergence of prosumers. This article proposes an innovative business model to harness the potential of aggregating behind-the-meter residential storage in which the aggregator compensates participants for using their storage system on an on-demand basis. A bilevel optimization model is developed to evaluate the ...

Partnering with such an experienced investor like CIP allows us to deliver projects that sets new standards for energy storage in Italy," Castiglioni said. Earlier this month, CIP ...

(Behind-the-Meter Energy Storage)(?)? „?? ?

The development of large-scale battery projects aligns with CIP's growing focus on energy storage. With Italy's supportive regulatory environment, the partnership aims to ...

A less common benefit, but a significant one nonetheless, is the opportunity behind the meter storage offers for large energy users to reduce their connection charges. These vary depending on peak import and export volumes. What a battery storage system allows an organisation to do, it is to smooth out its peaks. Why behind the meter should

Profitability of energy arbitrage net profit for grid-scale battery energy storage considering dynamic efficiency and degradation using a linear, mixed-integer linear, and mixed ...

energy integration and services such as demand-side response). This document focuses on investor-owned batteries located in front of the meter that may be developed by "stacking up" different sources of revenue. Business models 4 Location\* Owner\*\* Revenue streams and benefits Front of the meter Behind the meter Utility / investor Consumer

Discover the top behind-the-meter (BTM) trends from Gridcog Unplugged London, including market reform, co-location strategies, and battery storage investments. Learn how regulatory changes and energy innovations ...

In Part 2 of this series, we'll dive into the revenue-generating opportunities available to behind-the-meter battery storage systems that can access the wholesale energy ...

Europe are wholesale energy market arbitrage, ancillary services and long term capacity provision. Installed on the site of a renewable energy plant, BESS can store surplus energy during periods of high generation and release it when demand peaks or during periods of low renewable energy production or even when available capacity in the grid ...

MP: Italy's renewable energy sector has indeed advanced significantly, with renewables contributing nearly 40% of national electricity as of 2023. However, their ...

Behind-the-meter (BTM) energy storage, on the other hand, is installed on the consumer's side of the meter and optimizes the self-consumption of private households, commercial operations and industry, reducing their ...

Keywords--size optimization, BTM BESS, energy arbitrage, frequency regulation, multi-revenue streams I. INTRODUCTION Behind-the-meter (BTM) battery energy storage system (BESS) is often referred to as small-scale stationary batteries, which are usually connected behind the utility meter of residential, commercial, and industrial customers [1].

Meanwhile, Grintals said, there is something more of a "natural growth factor" associated with both main types of behind-the-meter (BTM) energy storage, residential and C& I, with the latter in particular expected to fuel a ...

The second edition will shine a greater spotlight on behind-the-meter developments, with the distribution network being responsible for a large capacity of total energy storage in Australia. Understanding connection issues, ...

Applications for Behind the Meter Storage As discussed earlier, behind the meter (BTM) refers to the electrical system on the consumer side of the power meter. Energy storage solutions in BTM applications have been used for many years as a standby power source in the case of power loss. Historically, lead-based batteries were the

Concerns about climate change have led global efforts to boost the share of renewable resources in electricity generation [1]. One solution can be equipping residential users with roof-top photovoltaics (PVs) for on-site self-consumption [2] sides, integrating PVs with battery energy storage systems (BESSs) enhances energy efficiency and power supply ...

Abstract: Behind-the-meter (BTM) energy storage offers the potential for shared investment by utilities and their customers, in which both parties share in the costs and benefits of battery ...
