

Figure 6 shows typical PSpice simulation results, plotting the voltage V_P generated by the piezoelectric converter and the voltage $V_C(k)$ across the storage capacitor for different values of C_b ...

The Marx generator is a capacitive energy storage circuit which is charged to a given voltage level and then quickly discharged, delivering its energy quickly to a load at very high power levels. A typical Marx circuit uses resistors to charge N capacitors in parallel to a voltage V , as shown in Figure 1. When triggered, the first switch

A simple battery model, shown in Fig. 2, is composed of a series of internal resistance connected to an ideal voltage source. State of charge (SOC) is not considered in this model. In this figure, V_o is an ideal open-circuit voltage, V_t is the terminal voltage of battery and R_{int} is the internal series resistance. In the simple battery model, V_t can be clarified by an ...

Energy storage systems (ESS) with batteries have been routinely deployed in contingency applications such as uninterruptable power supplies (UPS), ac-microgrids, and vehicle engine starters, where ...

using a flywheel (FES) and a supercapacitor (SC) as energy storage devices. The simulation and results for the charging process of a vehicle battery are given. II. BACKGROUND A. PHEV Charging Equipment 1) Equipment Role: A very important impacts concerns the development of the charging equipment for the market integration and daily use of PHEVs.

The purpose of this work originally started as a way to use various electrochemical methods to evaluate a real-world fuel cell system. Except for the current-voltage (i - V) curve, the diagnostics using the EIS impedance technique can obtain more useful parameters about the PEM fuel cell system at load. Impedance data need fit to an equivalent circuit diagram ...

The circuit simulator PSPICE is used to compose battery model at V_{oc} 12V, I_{sc} 4.8A, and six cells at 25 C. ... and control of the balancing process, this research proposes a novel technique that ...

To model the state-of-charge, a simple, appropriately sized capacitor is used as the charge storage element that simulates the available charge of the cell. This capacitor is ...

The capacitive load switching (CLS) mode was implemented as a feature of PROFET(TM) Load Guard 12V devices to handle the initial inrush current of the capacitor and ...

simulation of the proposed method uses a low-cost, low-power consumption microcontroller, which controls a

buck type dc-dc converter and performs all control functions ...

The simplified model of the CWG consists of an High-Voltage source U , a charging resistor R_c , an energy storage capacitor C_c . This part of circuit is connected by a switch to 2 Pulse duration shaping resistors R_s , an impedance ...

The design of a high-frequency switching mode charger (HFSMC) was optimized using a PSPICE simulation of the charging system including a valve regulated lead-acid (VRLA) battery pack and the HFSMC.

This research intends to design and simulation a model of "Lead-acid battery" using OrCAD PSPICE. It can be used for most renewable energy systems applications. The circuit simulator ...

According to the requirement of driving power supply for pulsed semiconductor laser, a method of constant current output is proposed by combining large energy storage ...

The front stage uses the buck circuit to charge the energy storage capacitor, and through the hysteresis control of the buck circuit, the voltage of the energy storage capacitor is controlled.

The circuit simulator PSPICE is used to compose battery model at V_{oc} 12V, I_{sc} ... by using voltage controlled-voltage sources in order to describe the battery behavior based of the its state-of-charge and capacitor in order to model the battery capacity in open circuit. ... Energy storage using electrochemical battery systems has been widely ...

In this letter, a PSPICE based simulation is conducted to analyze the system of a vibration energy harvester with multiple piezoelectric components and the basic energy storage circuit. By the ...

Battery pack charging results
 Parameter Without equalization With equalization
 Charging time(h:m:s) 3:30:22 4:20:15
 Charging capacity(Ah) 175.4 216.9
 Charging energy(Wh) 1956.7 2455.8
 5. Conclusion In this paper, a new kind of battery-liquid metal battery was studied, and a equalization management system for the series battery pack is designed.

supplies, capacitor charging power supplies (CCPS) are normally used for providing energy to the capacitor. The capacitor banks are generally used for primary electrical energy storage in pulsed power supplies [2]. The capacitors are charged and discharged rapidly into the load. The

pspice simulation energy storage capacitor charging process
 A High-power 200 kV Power supply for capacitor charging applications
 Development and testing of a compact 200-kV, 10-kJ/s ...

In the first hand, I have tried to charge the capacitors in a period of time. However, the charging current is very high and I am not sure whether the capacitor will be completely charged or not. Therefore, I am looking

for a way to initiate the initial state of charge of a ...

One approach to address the above issues is to enhance the DCFC station with a battery energy storage system (BESS). Unlike conventional charging stations [4] [5][6][7][8][9][10][11][12][13][14 ...

In this paper is presented a model for Pspice simulation of circuits that included lead-acid battery in their structure. Based on the discharging characteristics and operation principles of the Lead-Acid battery, the equivalent Pspice model was implemented by using voltage controlled-voltage sources in order to describe the battery behavior based of the its state-of-charge and capacitor ...

To model the state-of-charge, a simple, appropriately sized capacitor is used as the charge storage element that simulates the available charge of the cell. This capacitor is sized so that it has a value of 1 Volt at 100% cell capacity and 0.5 Volts at 50% cell E_Cell signifies the PSpice call to a VCVS named E_Cell

Simple model of Lithium Ion Battery (PSpice) - Download as a PDF or view online for free. Submit Search. ... electric vehicles, and stationary energy storage. ... The model allows users to simulate the capacitor's charge and ...

Download scientific diagram | (a) Scheme of mode-A circuit and (b) output pulse of Pspice simulation. from publication: Development of Rectangle-Pulse Marx Generator Based on PFN | In this paper ...

A new architecture of high voltage pulse generator has been proposed. It is based on combining two types of switches" technologies, namely IGBT used as opening switch and spark gap used as ...

PSpice includes a library of over 33,000 simulation-ready models from various IC vendors for quick definition and simulation of critical circuits. Modeling wizards allow efficient modification of pre-defined models for sources, switches, ...

Supercapacitors can store electric charge through a process called double layer capacitance. They have a higher power density than batteries but a lower energy density. A supercapacitor increases its capacitance and ...

Development and testing of a compact 200-kV, 10-kJ/s industrial-grade power supply for capacitor charging applications is described. Pulse repetition rate (PRR) can be from single shot to 250 Hz ...

As a first step in the design of a repetitive pulsed neutron generator, a very small plasma-focus device has been designed and constructed. The system operates at low energy 160 nF capacitor bank ...

The charging resistors value is selected after a PSPICE simulation of the charging circuit for different values of the charging resistor. The charging current is limited with the selected resistor
