Their total energy capacity reaches 48 million kW, accounting for 43 percent of the national total capacity. With a planned total investment exceeding 400 million yuan (\$54.8 million), once fully operational, Inner Mongolia's electricity transmission capacity is set to exceed 100 million kWh, which will cement its leading position in the country.

In the field of renewable energy, such as solar and wind energy, batteries manufactured with graphite anode materials can effectively store intermittent energy sources. This makes renewable energy more reliable and easier to ...

Battery electricity storage is a key technology in the world's transition to a sustainable energy system. Battery systems can support a wide range of services needed for the transition, from providing frequency response, reserve capacity, black-start capability and other grid services, to storing power in electric vehicles, upgrading mini-grids and supporting "self-consumption" of ...

Ronglian Technologies offers a self-developed blockchain data base-level construction platform and an upper-level big data AI processing platform. They build a basic framework using blockchain technology as the underlying data. It offers data products and solutions based on blockchain and AI technology to energy consumers and suppliers.
