

What did Rwanda Energy Group achieve in the fiscal year 2019/20?

This report highlights the key achievements realized in the Fiscal Year 2019/20 by the Rwanda Energy Group Ltd, through its subsidiaries EDCL and EUCL, against targets that were agreed in alignment with national strategic documents such as Vision2020, NST1, REG Imihigo and other high-level decisions as well as the REG strategic plan.

How will Rwanda achieve its energy goals in 2024?

In view of this, REG Ltd continues to strategize on how to achieve the targets of 2024 for increasing electricity access to 100% of all Rwandan households, reduction of biomass energy use to 42% as well as increasing Rwanda's electricity generation capacity to 556MW.

How has Human Resources Development impacted the energy sector in Rwanda?

Capacity building Human capacity development has been at the forefront of interventions within the energy sector. REG continues to ensure adequate skillsets among its staff to ensure that all Rwandans are served with electricity by end of 2024. In the 2019/2020, the following were accomplished in the sphere of human resources management;

What is the most used energy source in Rwanda?

As the above graph indicates, oil is the most used fuel in Rwanda for power generation (accounting for over 50% in 2020). Hydropower accounts for more than 40% of the total electricity generated in Rwanda and thus is the most used renewable energy source currently and is projected to remain so in the future.

Does Rwanda have a 100% electric grid?

Among other development strategies, the country has targeted 100% electrification by 2024 with 70% on-grid and 30% off-grid. As of March 2022, the cumulative connectivity rate is 69.80% of Rwandan households including 49.23% connected to the national grid and 20.57% accessing through off-grid systems (mainly solar).

Can Rwanda use solar energy?

Solar With an average irradiation of 4.99 kWh/m²/day, Rwanda has a high potential for solar energy deployment. Currently solar energy is used by both on-grid and off-grid utilities aggregating to a total of 5% of the energy injected to the grid.
