

How does sax home storage work?

With plug-in technology, the SAX Home storage is connected to the consumer network via a plug-in system („Wieland RST plug") approved in accordance with standard VDE 0100-551. The ADW400 smartmeter is used behind the electricity meter to record the power flow between the public grid and the consumer (Fig. 7).

Is electrical energy stored in the sax home storage tank?

Helpful information. Electrical energy is stored in the SAX home storage tank. Improper handling may endanger the life of the user or third parties or may result in damage to the storage device and other material assets. It is therefore essential that you adhere to the safety instructions described in this document.

How do I order cables for sax home storage?

Required cables for professional connection of the SAX home storage are not included in the scope of delivery. You can order the necessary cables via the SAX Power online store. The display is a power-saving e-paper display, when switched off the last state remains permanently visible on the display.

How much power can a sax Home Store?

In addition, the power at the corresponding circuit breaker is measured (also using latching current transformers) in order to avoid an overload in the supply lines behind it. According to VDE 0100-551, a nominal power of the SAX Home storage of 3.7 kW can thus be used in plug-in operation.

How many storage units can a sax power stand hold?

As an alternative to wall mounting, SAX Power offers a stand that can hold up to 3 storage units. The dimensions of the stand are 35cm x 70cm x 180cm. Determine the position of the wall mount

How do I connect a smart meter to a sax home storage unit?

Communication between the smart-meter and the SAX Home storage is via a LORA radio link, or optionally RS485 cable connection. The storage unit is connected to the Internet via a LAN cable. The power connection is made in the same way as the standard installation. See „Making the power connection" on page 27.
