Why do we need electrochemical storage systems?

Therefore, in order to guarantee a production of electricity in adequacy with the user's consumption, these renewable energies must be associated with storage systems to compensate the intermittent production. Electrochemical storage systems are good candidates to ensure this function.

How is thermal energy stored?

Thermal energy is stored solely through a change of temperature of the storage medium. The capacity of a storage system is defined by the specific heat capacity and the mass of the medium used. Latent heat storage is accomplished by using phase change materials (PCMs) as storage media.

What is the learning rate of China's electrochemical energy storage?

The learning rate of China's electrochemical energy storage is 13 % (±2 %). The cost of China's electrochemical energy storage will be reduced rapidly. Annual installed capacity will reach a stable level of around 210 GWh in 2035. The LCOS will be reached the most economical price point in 2027 optimistically.
