

How long do lithium based batteries last?

When stored at the right temperature, humidity, and State of Charge, standard lithium based batteries can have a shelf life of up to ten years. Military and Medical lithium based batteries can have a shelf life of up to twenty plus years.

How to store lithium ion batteries safely?

1. Storing Lithium Ion Batteries at The Right Temperature. The typical lithium ion battery storage temperature range of a home or storage unit is usually storing lithium batteries safely. The range of safe storage temperatures is wide, as shown in the chart below. However, issues like decreased battery lifespan occur in extreme weather conditions.

How often should you recharge lithium batteries in storage?

It is recommended to recharge them every 12 months to maintain their optimal charge level. This is because lithium batteries self-discharge. Fully charging the battery and leaving it in storage for a long time can cause the battery to lose capacity.

How to prolong the shelf life of lithium ion batteries?

There are several strategies that manufacturers, distributors, and consumers can follow to prolong the shelf life of lithium-ion batteries: Lithium batteries should be stored in cool environments, ideally between 15°C and 25°C (59°F to 77°F), and avoid high temperatures. Store at a partial charge.

What temperature should lithium batteries be stored?

Lithium batteries are not likely to suffer any noticeable damage unless you store them at consistently extreme temperatures such as under 20 degrees or over 100 degrees Fahrenheit. Nevertheless, keeping them at a comfortable temperature is ideal for battery longevity.

What is the optimal charge level for storing lithium-ion batteries?

The optimal charge level for storing lithium-ion batteries is between 40% and 60%. While it may seem counterintuitive, storing a lithium battery at full charge (100%) or fully discharged (0%) can cause stress and accelerate the degradation of the battery cells.
