

The national energy administration will supervise new energy storage issues

Will China achieve full market-oriented development of new energy storage by 2030?

The country has vowed to realize the full market-oriented development of new energy storage by 2030, as part of efforts to boost renewable power consumption while ensuring stable operation of the electric grid system, a statement released by the National Development and Reform Commission and the National Energy Administration said.

Will NEVs become a part of the electrochemical energy storage system?

By 2030, the NEVs will become an important part of the electrochemical energy storage system, said the guideline. The guideline outlines six major tasks, including improving the supporting electricity price and market mechanism and systematically strengthening power grid enterprises' support capabilities.

What is the NEA 'promotion of new energy storage integration & dispatch utilization'?

The NEA issued a notice in April titled "Promotion of New Energy Storage Integration and Dispatch Utilization", aimed at standardizing the integration of new energy storage into the grid and promoting efficient dispatch utilization of new energy storage.

How is the government advancing energy storage technologies?

The government has been continuously advancing energy storage technologies, with several compressed air energy storage, flow battery storage, and sodium-ion battery storage projects put into operation across the nation, Bian Guangqi, an NEA official, said at the conference.

Will China's energy storage capacity exceed 30 GW by 2025?

According to the Guiding Opinions on Accelerating the Development of New Energy Storage report jointly issued by the National Development and Reform Commission and the National Energy Administration, China's installed capacity for new energy storage will exceed 30 GW by 2025.

What is new energy storage?

New energy storage refers to electricity storage processes that use electrochemical, compressed air, flywheel and supercapacitor systems but not pumped hydro, which uses water stored behind dams to generate electricity when needed.

The country has vowed to realize the full market-oriented development of new energy storage by 2030, as part of efforts to boost renewable power consumption while ensuring stable operation of the electric grid system, a statement released by the National Development ...

A new electricity system adapting to increasingly high proportion of new energy will be built, the circular said, with an emphasis on efforts to facilitate the power distribution network to accommodate distributed new energy. More administrative reforms were urged in the field of new energy, such as higher efficiency in

The national energy administration will supervise new energy storage issues

project approvals ...

By the end of March, China's installed new-type energy storage capacity had reached 35.3 gigawatts, soaring 2.1 times over the figure achieved during the same period last ...

The latest data from the National Energy Administration showed that as of the end of 2022, the installed capacity of new energy storage projects put into operation nationwide had reached about 8.7 ...

The white paper Energy in Chinas New Era conforms to a series of important statements on energy development made by General Secretary Xi Jinping, and comprehensively introduces Chinas implementation of a new energy security strategy featuring Four Reforms and One Cooperation.

Figures released by the National Energy Administration reveal that by the end of June, China completed and put into operation new energy storage projects with a cumulative installed capacity exceeding 17.33 gigawatts, with ...

New energy storage can participate in the medium and long-term, spot and ancillary service markets to obtain benefits. 4. Aiming at the points of new allocation for energy storage, and specifying the focus of subsequent ...

According to data from the National Energy Administration, in the first quarter of 2023, the country had 47.4 million kilowatts of renewable energy installations, a year-on-year increase of 86.5 percent, accounting for 80.3 percent of the newly installed capacity of all energy types. ... To deal with problems in the establishment of new power ...

Liu Yafang, an official with the National Energy Administration, said that compared with traditional pumped-hydro storage, new energy storage can complement pumped-hydro storage and address the randomness and high volatility issues brought by the integration of new energy sources into the power system.

The latest data from the National Energy Administration showed that as of the end of 2022, the installed capacity of new energy storage projects put into operation nationwide had reached about 8.7 million kW, with an average energy storage time of about 2.1 hours, an increase of over 110 percent from the end of 2021.

In recent years, especially since the 18th CPC National Congress, under the strong leadership of the CPC Central Committee, the energy industry has thoroughly implemented Xi Jinping thought on eco-civilization and a new ...

Fueled by innovative technologies and rapid advances in the renewables sector, China's energy storage capacity is poised for significant growth, the National Energy ...

The national energy administration will supervise new energy storage issues

On August 27, 2020, the Huaneng Mengcheng wind power 40MW/40MWh energy storage project was approved for grid connection by State Grid Anhui Electric Power Co., LTD. Project engineering, procurement, and construction (EPC) was provided by Nanjing NR Electric Co., Ltd., while the project's container e

We will advance the flexible transformation of coal power, and accelerate the construction of pumped power storage, peak regulation of natural gas and electricity usage, ...

Currently, the global energy development is in the transformation period from fossil fuel to new and renewable energy resources. Renewable energy development as a major response to address the issues of climate change and energy security gets much attention in recent years [2]. Fig. 3 shows the structure of the primary energy consumption from 2006 to ...

To facilitate the progress of energy storage projects, national and local governments have introduced a range of incentive policies. For example, the "Action Plan for Standardization Enhancement of Energy Carbon Emission Peak and Carbon Neutrality" issued by the NEA on September 20, 2022, emphasizes the acceleration of the improvement of new energy storage ...

The National Development and Reform Commission (NDRC), China's top economic planner, and the National Energy Administration (NEA) jointly issued a policy guideline on improving institutional ...

In July, the National Development and Reform Commission and the National Energy Administration co-released a guideline on power storage development. The guideline called on local governments to roll out development plans which need to clarify goals and key missions during the 14th Five-Year plan period.

In order to link different green power products from the perspectives of power generation and users, to provide a unique and authoritative proof for green power production and consumption, and to further enhance the role of green electricity certificates in building a

In November 2014, the State Council of China issued the Strategic Action Plan for energy development (2014-2020), confirming energy storage as one of the 9 key innovation fields and 20 key innovation directions. And then, NDRC issued National Plan for tackling climate change (2014-2020), with large-scale RES storage technology included as a preferred low ...

The nation's energy storage capacity further expanded in the first quarter of 2024 amid efforts to advance its green energy transition, with installed new-type energy storage capacity reaching 35.3 gigawatts by end-March, ...

China's National Energy Administration (NEA) has decided to make multi-pronged efforts to advance the high-quality development of the domestic energy sector. ... increase oil and gas exploration, storage and production, keep domestic crude oil production at 200 million tonnes in the long run, and maintain a natural

The national energy administration will supervise new energy storage issues

gas self-sufficiency rate of ...

In April of this year, the National Energy Administration issued the "Notice on Promoting the Grid Connection and Dispatch Utilization of New Energy Storage" (National ...

At a news conference for the 20th National Congress of the Communist Party of China, Ren Jingdong, deputy director of the National Energy Administration and member of the administration's CPC leadership group, said that while further consolidating the foundation of conventional energy supply, China will vigorously develop renewable energy ...

On March 21, the National Development and Reform Commission (NDRC) and the National Energy Administration of China issued the New Energy Storage Development Plan During China's "14th Five-Year Plan" Period. The ...

Editor's note: A survey among China Daily's overseas readers ahead of the 20th National Congress of the Communist Party of China shows that the nation's ecological progress, economy, diplomacy, science and technology, and the Belt and Road Initiative are among some of the most closely observed issues. China Daily is publishing a series of special articles to ...

Stepping up efforts to develop new energy storage technologies is critical in driving renewable energy adoption, achieving China's 30/60 carbon goals, and establishing a new power system. In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the

The National Energy Administration has said previously that further efforts are in the pipeline to speed up power grid construction and enhance the power transmission mechanism in the country, as ...

The guideline, jointly released by four authorities including the NDRC and the National Energy Administration, aims to give full play to NEVs' important role in ...

The latest data from the National Energy Administration showed that as of the end of 2022, the installed capacity of new energy storage projects put into operation nationwide had ...

The northwestern regions of the country, rich in solar and wind energy resources, has become the fastest region in developing new energy storage in the country, with 10.3 million kilowatts of new ...

On June 12, the National Energy Administration approved 310 energy industry standards such as "New Energy Base power Transmission Configuration New energy storage Planning Technical Guidelines" and 19 foreign language editions of energy industry standards such as "Code for Seismic Design of Hydropower Projects",.
