

The principle of energy storage device of excavator

What is a hydraulic excavator energy saving system?

In order to address these issues, a hydraulic excavator energy saving system based on a three-chamber accumulator is proposed. Firstly, the conventional piston-type hydraulic accumulator is integrated with the hydraulic cylinder to form a three-chamber accumulator, which has a pressurizing function during energy storage.

Can a hydraulic excavator save energy?

Then, a hydraulic excavator energy saving system based on three-chamber accumulator is proposed, which can store and reuse the energy loss from throttling and overflow of the hydraulic system without changing the hydraulic system of the excavator.

What are hydraulic energy recovery methods for excavators?

Currently, the mainstream hydraulic energy recovery methods for excavators mainly include the electric energy regeneration system (EERS) and the hydraulic energy regeneration system (HERS).

How does an engine excavator work?

In conventional excavators, the engine is able to handle all the power needs of an excavator, including turning. In an engine excavator power train system, mechanical rotational energy is transferred from the diesel engine to the hydraulic pump and converted into hydraulic energy.

What power source does an electric excavator use?

It is basically assumed that the fuel cell, which is the main power sources of the electric excavator, the battery, and the super capacitor of the energy regeneration system, can cover the power of the existing engine excavator. In particular, the super capacitor is responsible for powering the upper body of the excavator.

What is the power train of electric excavator?

Power train of electric excavator including regeneration system It is basically assumed that the fuel cell, which is the main power sources of the electric excavator, the battery, and the super capacitor of the energy regeneration system, can cover the power of the existing engine excavator.

Aiming at the large hydraulic excavator of which the boom is driven by dual hydraulic cylinders, the principle of double hydraulic-gas energy storage cylinders driving the ...

A hydraulic accumulator is a device that stores the potential energy of an incompressible fluid held under pressure by an external source against some dynamic force. This dynamic force can come from different sources. The stored potential energy in the accumulator is a quick secondary source of fluid power capable of doing useful work.

The principle of energy storage device of excavator

Energy storage devices with the smart function of changing color can be obtained by incorporating electrochromic materials into battery or supercapacitor electrodes. In this review, we explain the working principles of supercapacitors, batteries, and electrochromic devices. In addition, we discuss the material candidates for electrochromic ...

By storing this energy, the accumulator enables the excavator to handle peak power demands and sudden surges, resulting in more precise and effective excavating. This device serves as ...

Haji Abedin and Rosen [51] review principles of thermochemical energy storage and recent developments, and compare thermochemical storage systems with other TES systems. Due to the high cost of materials and operating problems, few long-term sorption or thermochemical energy storages are in operation. ... The primary energy-storage devices used ...

The hydraulic cylinders in the system with GPER device are equivalent to three piston cylinders A, B, and C which respectively represent the rodless chamber A, rod chamber B and energy storage chamber C. Fig. 3 shows the operation principle of the systems with and without GPER device.

Potential energy recovery (ER) is an effective way to reduce energy consumption of hybrid hydraulic excavators; however, the ER system with a direct speed-control strategy is prone to oscillation of actuators due to the reduction of damping in comparison to the conventional throttle governing system. This paper aims to improve the boom control performance of a ...

Hydraulic accumulators represent an essential facet of an excavator's energy storage architecture. Essentially, these devices function by harnessing energy in the form of ...

Research on energy saving system of hydraulic excavator based ... Based on the result $1.84/1.2842 = 1.4328$, it can be concluded that the energy storage density of the TCA is 1.4328 times higher than that of conventional accumulators. This implies that the energy storage density has increased by 43.28 %. 3. Design of energy

The main consequences of low-energy efficiency are two-fold. Many tons of carbon dioxide (CO₂) and pollutants of concern are released into the atmosphere, such as nitrogen oxides (NO_x), fine particulate matter (PM_{2.5}), carbon monoxide (CO), and hydrocarbon (HC). Significant examples are the 2,700 tons of annual equivalent CO₂ for a single shovel [2] ...

As the boom of a hydraulic excavator drops, the potential energy accumulated during the lifting process is converted into thermal energy and dissipated through the throttling action of the hydraulic valve, leading to excessive fuel consumption and serious energy waste. In order to address these issues, a hydraulic excavator energy saving system based on a three ...

However, the amount of this energy is not large, and the research is focused on regenerative braking of the swivel part. In the case of the Komatsu hybrid excavator, the hydraulic motor of the swing part was replaced with an electric swirl motor, and a super capacitor was used as an energy storage device to recover braking energy when turning.

The invention discloses an energy release control device of an energy accumulator of a hydraulic excavator. The energy release control device comprises an electromagnetic proportional control valve, an electromagnetic valve, a guide handle and a movable arm energy storage oil cylinder. On one hand, the electromagnetic proportional control valve is connected with the energy ...

II. WORKING PRINCIPLE OF ELECTRIC EXCAVATOR Figure1shows the principles of the proposed electric excavator scheme and new linear actuator.
