Why do energy systems need storage?

Those networks often use continuous sources of heat, such as geothermal or power plants. Storage can help to optimally use the available heat and power. Additionally, the demand of heat and availability of heat become even more disconnected, as energy systems become more sustainable. This leads to an even greater need for storage.

Does guide plate influence air cooling heat dissipation of lithium-ion batteries?

Due to the thermal characteristics of lithium-ion batteries, safety accidents like fire and explosion will happen under extreme conditions. Effective thermal management can inhibit the accumulation and spread of battery heat. This paper studies the air cooling heat dissipation of the battery cabin and the influence of guide plate on air cooling.
