How can flywheels be more competitive to batteries?

The use of new materials and compact designs will increase the specific energy and energy density to make flywheels more competitive to batteries. Other opportunities are new applications in energy harvest, hybrid energy systems, and flywheel's secondary functionality apart from energy storage.

Why do we need a flywheel?

A diversity of technology solutions is necessary to create a competitive marketplace and address all demands for the utility-scale energy storage challenge, including the flywheel. A flywheel is a "mechanical battery" that stores kinetic or moving energy.

Residential Solar Storage Systems. Our Residential Solar Storage Systems are designed to provide homeowners with a reliable and efficient way to store excess solar energy, reducing electricity bills and increasing energy independence. With advanced battery technology, you can store energy during the day and use it at night, ensuring your home is always powered.

Other opportunities are new applications in energy harvest, hybrid energy systems, and flywheel's secondary functionality apart from energy storage. Declaration of Competing Interest The authors declare that they have no known competing financial interests or personal relationships that could have appeared to influence the
