How to calculate energy stored in a capacitor? Energy Stored in a Capacitor and an Inductor [youtube.com](https://www.youtube.com/watch?v=UCUUC) What is UC U C stored in a capacitor?

The energy UC U C stored in a capacitor is electrostatic potential energy and is thus related to the charge Q and voltage V between the capacitor plates. A charged capacitor stores energy in the electrical field between its plates. As the capacitor is being charged, the electrical field builds up.

How do you calculate the energy needed to charge a capacitor?

The total work W needed to charge a capacitor is the electrical potential energy U C stored in it, or $U C = W$. When the charge is expressed in coulombs, potential is expressed in volts, and the capacitance is expressed in farads, this relation gives the energy in joules.
