What are the challenges of energy storage?

Therefore, the uninterrupted supply of energy is one of the greatest needs and challenges of the modern world. In this context, TES technology is positioning itself as a solution to the challenges of energy storage. Currently, the energy supply highly depends on the fossil fuels that make the environment vulnerable inducing pollution in it.

Why is energy storage a problem?

The lack of direct support for energy storage from governments, the non-announcement of confirmed needs for storage through official government sources, and the existence of incomplete and unclear processes in licensing also hurt attracting investors in the field of storage (Ugarte et al.).
