Pumped hydroelectric storage is the oldest energy storage technology in use in the United States alone, with a capacity of 20.36 gigawatts (GW), compared to 39 sites with a capacity of 50 MW (MW) to 2100 MW [[75], [76], [77]]. This technology is a standard due to its simplicity, relative cost, and cost comparability with hydroelectricity.

Supercapacitors currently exhibit an intermediate level of performance, positioned between ordinary batteries and dielectric capacitors. Supercapacitors mostly have a lower energy density compared to many batteries [9]. However, their specific energy storage technique allows them to release or store a significant quantity of electricity extremely rapidly [10].

Renewable Energy Certificates (RECs), also known as renewable energy credits, are tradable environmental commodities that represent the environmental attributes associated with the generation of renewable energy. RECs are bought and sold on various renewable energy markets and can be purchased by businesses, governments, and individuals.
