Increasing its working voltage requires larger serially-connected cell strings, leading to reductions in system-level reliability.

What is a chemical energy storage system?

Chemical energy storage systems (CESSs) Chemical energy is put in storage in the chemical connections between atoms and molecules. This energy is released during chemical reactions and the old chemical bonds break and new ones are developed. And therefore the material's composition is changed. Some CESS types are discussed below. 2.5.1.
