How is energy storage power station distributed?

The energy storage power station is dynamically distributed according to the chargeable/dischargeable capacity, the critical over-charging ES 1# reversely discharges 0.1 MW, and the ES 2# multi-absorption power is 1.1 MW. The system has rich power of 0.7MW in 1.5-2.5 s.

What happens when energy storage absorption power is in critical state?

When the energy storage absorption power of the system is in critical state, the over-charged energy storage power station can absorb the multi-charged energy storage of other energy storage power stations and still maintain the discharge state, so as to avoid the occurrence of over-charged event and improve the stability of the black-start system.

How energy storage system works?
