Why is energy storage a problem?

The lack of direct support for energy storage from governments, the non-announcement of confirmed needs for storage through official government sources, and the existence of incomplete and unclear processes in licensing also hurt attracting investors in the field of storage (Ugarte et al.).

Why is non-acceptance of energy storage systems a problem?

Non-acceptance of EES systems by the industry can be a significant obstacle to the development and prevalence of the utilization of these systems. To generate investment in energy storage systems, extensive cooperation between facility and technology owners, utilities, investors, project developers, and insurers is required.

Are energy storage systems economically feasible?

The auxiliary components required by some energy storage systems determine the total system costs and are often independent of system size. For these reasons, some storage systems are only economically feasible above a minimum energy content and power output.
