What is a gravity battery?

A gravity battery is a type of electricity storage device that stores gravitational energy, the energy stored in an object resulting from a change in height due to gravity, also called potential energy. It works by using excess energy to raise a mass to generate gravitational potential energy.

What type of energy does a gravity battery store?

A gravity battery is a type of electricity storage device that stores gravitational energy, the energy stored in an object resulting from a change in height due to gravity, also called potential energy.
