All-in-one battery energy storage system (BESS) - These compact, all-in-one systems are generally the most cost-effective option and contain an inverter, chargers and solar connection in one complete unit. Modular DC Battery System - Hybrid inverters for home energy storage are connected to a separate, modular DC battery system.

What are the different types of home energy storage systems?

The two most common types of home energy storage systems are: All-in-one battery energy storage system (BESS)- These compact, all-in-one systems are generally the most cost-effective option and contain an inverter, chargers and solar connection in one complete unit.

What factors should I consider when choosing a battery storage system?

When choosing a battery storage system, consider factors such as your energy use and tariff, the time of use, and the size of your household. The total installed cost of the battery storage system versus the expected savings should also be taken into account.

How much energy does a typical house use in a day?

A 'typical' house may use around 18 kWh of energy per day with a maximum power consumption of 4.5-15 kW, although this can vary significantly. To determine your energy use, check your electric bill. As long as you stay connected to the grid, your battery storage system can store this energy in kilowatt hours (kWh).

With a capacity of 13.5 kWh, it offers plenty of energy storage to get you through power outages. The 10-year warranty also provides peace of mind that the product is built to last.

Renewable Energy Council website. Why Storage? A continuously dependable source of electric power has become a necessity in modern life. BESS can mitigate the effects of brownouts or power outages by providing a reliable source of power when electric utility power becomes unavailable. In addition to providing household energy resilience, BESS
