What is the growth rate of industrial energy storage?

The majority of the growth is due to forklifts (8% CAGR). UPS and data centers show moderate growth (4% CAGR) and telecom backup battery demand shows the lowest growth level (2% CAGR) through 2030. Figure 8. Projected global industrial energy storage deployments by application

Could stationary energy storage be the future?

Our research shows considerable near-term potential for stationary energy storage. One reason for this is that costs are falling and could be \$200 per kilowatt-hour in 2020, half today's price, and \$160 per kilowatt-hour or less in 2025.

Is it profitable to provide energy-storage solutions to commercial customers?

The model shows that it is already profitable to provide energy-storage solutions to a subset of commercial customers in each of the four most important applications--demand-charge management, grid-scale renewable power, small-scale solar-plus storage, and frequency regulation.

What happened to energy storage in 2023?

In 2023, the commercial and industrial (C&I) energy storage sector saw a significant uptick in installations, marking a pivotal moment with 4.77 gigawatt-hours (GWh) of energy storage capacity added.

Why do companies invest in energy-storage devices?

Historically, companies, grid operators, independent power providers, and utilities have invested in energy-storage devices to provide a specific benefit, either for themselves or for the grid. As storage costs fall, ownership will broaden and many new business models will emerge.

Is C&I energy storage viable in 2023?

Consequently, the economic viability of C&I energy storage became increasingly compelling, catalyzing rapid growth within the energy storage industry. This robust momentum positioned 2023 as a promising starting point for C&I storage.

ATB represents cost and performance for battery storage across a range of durations (1-8 hours). It represents only lithium-ion batteries (LIBs)--with nickel manganese cobalt (NMC) and lithium iron phosphate (LFP) chemistries--at this time, with LFP becoming the primary chemistry for stationary storage starting in 2021.
