

What are textile energy storage devices?

Textile energy storage devices are integrated into textiles to power various functions like sensing, therapy, navigation, and communication, while maintaining good wearability similar to original textiles. This review introduces the design concepts and structures of such devices currently explored.

Is energy storage a key innovation field in China?

In November 2014, the State Council of China issued the Strategic Action Plan for energy development (2014-2020), confirming energy storage as one of the 9 key innovation fields and 20 key innovation directions.

How much energy does a textile battery store?

In contrast to traditional batteries, a textile battery bank carried by a person would be expected to store above 10,000 mAh at 3.8 V. Textile energy storage devices with varied energy storage capabilities must be created to meet diverse needs. Lighting up a LED is a good demonstration of a working device.

Why is energy storage industry in China a big problem?

Judging from the present condition, cost problem is the main barrier. And the high performance and high security of the relative technology still need to be improved. Until 2020, energy storage industry in China may not be spread massively and the key point during this period is the technology research.

Does China's energy storage industry have a comprehensive study?

However, because of the late start of China's energy storage industry, the comprehensive study for the whole industry is very few. We found a review which provided a relatively comprehensive analysis of the technical and economic issue of it. Compared with other studies, its research has a good comprehensiveness.

What are the problems limiting the commercialization of China's energy storage?

Besides the objective technology immaturity, there exist other problems restricting the commercialization of China's energy storage including the high cost, incomplete technical standard system, imprecise evaluation system and imperfect policies. 3.1. Low technical-economic efficiency caused by high cost
