

What are the energy storage mechanisms of aqueous rechargeable ZIBs?

Herein, the energy storage mechanisms of aqueous rechargeable ZIBs are systematically reviewed in detail and summarized as four types, which are traditional Zn²⁺ insertion chemistry, dual ions co-insertion, chemical conversion reaction and coordination reaction of Zn²⁺ with organic cathodes.

What are the different types of energy storage mechanisms?

Up to now, three types of energy storage mechanisms were proposed, including (i) Zn²⁺ insertion/extraction into/from MnO₂ [8, 33, 34, 35, 36], (ii) conversion between MnO₂ and MnOOH with the participation of H⁺, and (iii) co-insertion of H⁺ and Zn²⁺.

What are the redox mechanisms in high-performance Zn-based batteries?

In this review, we comprehensively present recent advances in designing high-performance Zn-based batteries and in elucidating energy storage mechanisms. First, various redox mechanisms in Zn-based batteries are systematically summarized, including insertion-type, conversion-type, coordination-type, and catalysis-type mechanisms.

Does ZnS/span enhance reversibility of lithium storage?

Notably, the ZnS/SPAN cell exhibited a higher voltage cathodic peak at 1.42 V in Range I compared to the pure SPAN cell, indicating that the incorporation of ZnS with SPAN enhances the reversibility of lithium storage.

What is the capacity of zns@mos₂-ZnS?

The capacity at the first cycle of ZnS@MoS₂ is 1407.4 and 1171.1 mAh g⁻¹ with an 83.2% coulombic efficiency (CE). Without interface regulation, the MoS₂-ZnS without interface regulation brings 1291.6 and 952.5 mAh g⁻¹ with a CE of 73.7%.

What is the synergy of ZnS/span?

The synergy in the ZnS/SPAN hybrid is attributed to its enhanced reaction kinetics and increased active reaction sites. Even under high current densities of 5 and 10 A g⁻¹, the ZnS/SPAN electrode demonstrated robust cycling performance, maintaining capacities of 285 and 107 mAh g⁻¹, respectively, after 600 cycles.

To overcome these issues, nanosized zinc sulfide (ZnS) modified with polyelectrolytes and graphene (ZnS-C/G) has been synthesized and investigated as an enhanced conversion-alloying anode material. In situ ...

Integrating ZnS with other metal sulfides is an effective strategy to take full advantages of synergistic effect of different composition, leading to enhance sodium ions storage properties. ZnS-Sb₂S₃@C hetero-structures bimetallic sulfides was prepared by simple hydrothermal and sulfuration process [30]. Due to the bimetallic hetero ...

Highly stabilized FeS₂ cathode design and energy storage mechanism study for advanced aqueous FeS₂-Cu battery. Author links open overlay panel Jiajun Chen, Zhenxin Zhao, Rong Niu, Yikun Yao, ... Copper activation enabling reversible aqueous Cu-ZnS battery chemistry. *Chemistry*, 29 (2023), Article e202300331. View in Scopus Google Scholar [25]

According to the UPS and UV-vis spectrum shown in Fig. 6 a and Fig. S17, and the corresponding curve of $(\alpha h\nu)^2$ vs $h\nu$ converted by Tauc plot in Fig. 6 b [59], the energy gaps and the energy level diagram are obtained in the Fig. 6 b and c. Obviously, loading ZnO-ZnS nanoparticles in the polymer contributes to enhance the energy gap from 3. ...

Properties of ZnS/graphene, such as formation energy of the Li adatom, activation energy for Li diffusion, pseudocapacity-like storage, and density of state (DOS), render ZnS/graphene a suitable anode material for a ...

This implies that H⁺ insertion, rather than Zn²⁺ insertion, is more likely to be the focus of the energy storage mechanism of γ -MnO₂. Density functional theory (DFT) results further demonstrated that the oxygen defects method (Fig. 8 c) considerably decreased the binding energy barrier of H⁺ insertion and facilitated rapid H⁺ insertion.

To delve deeper into the energy storage mechanism of MoS₂/ZnS, we conducted systematic in-situ and ex-situ characterizations to elucidate the reaction process under selected charge/discharge states. The phase transition in the second charge and discharge state was analyzed by ex-situ XRD (Fig. 6 a).

Based on the above discussion, the reaction mechanism of 3DOM ZnO/ZnS during discharge-charge process can be summarized as follows: Stage I, intercalation process: ... Na-ion batteries, recent advances and present challenges to become low cost energy storage systems. *Energy Environ. Sci.*, 5 (2012), pp. 5884-5901. Crossref View in Scopus ...

Electrolyte additives can make the ZnS to S process more reversible, provide additional capacity for Zn-S batteries and improved battery performance ... Exploring the energy storage mechanism of organic sulfides in aqueous electrolyte will inspire more about the application of conversion electrode materials in aqueous zinc electrodes [34].

The stepwise lithium storage mechanism in the heterostructure contributes to improved cycling stability and enhanced lithium storage capacity. Impressively, the ZnS@MoS₂ ...

Although AZIBs have many advantages as energy storage devices, the current high-performance cathode materials that can storage Zn²⁺ are slightly insufficient. Generally, Metal oxides as battery cathode materials have the advantages of high theoretical capacity, low cost and low toxicity, so they are expected to become an alternative material for the above ...

Therefore, the related Na storage mechanism for the Cu₂S@ZnS/C composite could be summarized as the following equation: Download: Download high-res image (515KB) Download: ... we anticipate that 3D printing technology will be referential for the development of large-scale energy storage devices with high energy and power densities in the future.

Notably, the ZnS/SPAN cell exhibited a higher voltage cathodic peak at 1.42 V in Range I compared to the pure SPAN cell, indicating that the incorporation of ZnS with SPAN ...

The lithium storage mechanism of ZnS is clarified and new insights into phase transition mechanism are proposed. ... Electrochemical energy storage is a rapidly growing research field due to the ever-increasing requirements for smart grids and electric/hybrid vehicles. Lithium-ion batteries (LIBs)

Here, a hollow ZnO/ZnS heterostructure with a nitrogen-doped carbon coating layer (ZnO/ZnS@NC) was rationally designed through a facile multistep strategy of template ...

Heterostructure construction is an effective method used to synthesize lithium-ion battery anode materials with high electrochemical performance. In this study, an interface regulated ZnS@MoS₂ heterostructure was achieved through a designed solvothermal strategy. The designed strategy introduces interface regulation in the heterostructure, increasing active ...

Through charge/discharge processes of in-situ XRD analysis, we confirm the sodiation/desodiation mechanism of ZnS NSs@rGO. 1. Introduction. With expanding market ...

Additionally, challenges related to polysulfide shuttling hinder battery cycle life and coulombic efficiency (CE). By combining zinc and sulfur, zinc-sulfur (Zn-S) batteries emerge as an environmentally friendly and cost-effective energy storage technology with high energy density (over 500 Wh/kg) relative to existing alternatives (Fig. 1).

In addition, the sodium storage mechanism of ZnS exhibits both alloying reaction and conversion reaction characteristics, which results in a significant volume change at the ZnS electrode, challenging the cycling stability. ... Energy storage mechanism, challenge and design strategies of metal sulfides for rechargeable sodium/potassium-ion ...

In this review, we comprehensively present recent advances in designing high-performance Zn-based batteries and in elucidating energy storage mechanisms. First, various redox mechanisms in Zn-based batteries are ...

The energy storage mechanism of the sulfur cathode in the Br⁻ electrolyte is investigated. We carried out galvanostatic charge-discharge at 0.1 A g⁻¹ and performed ex situ Raman, X-ray photoelectron spectroscopy ...

To further boost the kinetics and reduce oxidation energy barrier of ZnS, the bidirectional catalytic additive of Thiourea (TU) was introduced to aqueous ... Organic-inorganic hybrid cathode with dual energy-storage mechanism for ultrahigh-rate and ultralong-life aqueous zinc-ion batteries. *Adv. Mater.*, 34 (2022), p. 2105452, 10.1002 ...

To deeply understand working mechanism of ZnO-ZnS/rGO heterostructures in lithium sulfur batteries, their adsorption and electrocatalytic effects towards LiPSs are investigated in comparison to the ZnO/rGO and ZnS/rGO. ... which may provide great promising to investigate the various roles of different components in energy storage and catalysis ...

As shown in Fig. 5 f-g, after 24 h of storage, the capacity retention rate of full cells in Zn(BF₄)₂-DMSO electrolyte was 71.64 %, much higher than that in ZnSO₄·H₂O electrolyte (only 57.9 %), which further confirmed the progressiveness of ZnF₂-ZnS-rich SEI film in inhibiting side reactions and energy dissipation. Subsequently, the long ...

Rechargeable aqueous zinc-ion batteries (ZIBs) have resurged in large-scale energy storage applications due to their intrinsic safety, affordability, competitive ...

A competition-cooperation mechanism between adsorption and conversion reaction is proposed to explain this fluctuation. This work provides a new approach for the development of cathode materials for AZIBs and offers new insights into studying the electrochemical energy storage mechanisms of transition metal dichalcogenides.

Study on Colloidal Synthesis of ZnS Nanospheres Embedded in Reduced Graphene Oxide Materials for Sodium-ion Batteries and Energy Storage *Journal of Alloys and Compounds (IF 6.2)* 10. With growing demands for large-scale energy storage, metal sulfides have received great attention due to their high theoretical capacity as anode materials for ...

Many efforts have been made to reveal the energy storage mechanisms of Zn/MnO₂ ZIBs. Up to now, three types of energy storage mechanisms were proposed, including (i) Zn²⁺ insertion/extraction into/from ...

Aqueous Zinc-Iodine Batteries: From Electrochemistry to Energy Storage Mechanism. Hui Chen, Hui Chen. Key Laboratory of the Ministry of Education for Advanced Catalysis Materials, Department of Chemistry, Zhejiang Normal University, Jinhua, 321004 China. Search for more papers by this author.

Starting from the fundamentals of Zn-I₂ batteries, the electrochemistry of iodine conversion and zinc anode, as well as the scientific problems existing in Zn-I₂ batteries are ...

The anode electrochemical performance of lithium-ion batteries (LIBs) depends mainly on the structural stability of the electrode material and its conductivity, and its energy storage mechanism is mainly derived from the Faraday charge transfer that ...

Organic materials are promising cathodes for aqueous zinc-ion batteries (AZIBs) due to their cost-effectiveness, environmental friendliness, and tunable structures. However, the energy density of AZIBs remains limited by ...
